

PocketShell

Android terminal · PRoot / Alpine runtime ·
Companion web runtime

Read-only engineering audit of the shipped Linux runtime: the vendored Termux terminal stack and PTY architecture, the PRoot guest and its procfs contract, Android execution policy at targetSdk 28, ELF/libc compatibility strategy, the Companion resource model, and the proposed Runtime 2.0 glibc sidecar. Prepared to be merged with the independent Kilo/MiniMax guest-side forensic report.
